SUMMARY OF INFORMATION

Two vessels are involved. One is a medium sized cargo vessel (100-300 ft). It has a black hull, with white lettering, a white superstructure with one large smoke stack on top. The superstructure is near the stern. The name of the vessel starts with the sounds "CALEH_____". Panama is somehow associated with vessel (couldn't tell if this was the owner or managers nationality, the vessel's homeport or flag). The vessel is carrying solid, rock-like cocaine. This is not located in a container, but is in a sealed metal compartment in the absolute stern of the vessel, below deck, on the portside. This vessel is currently (061200L SEP 90) located at 08 55 N 90 45 W, heading northwest.

The second vessel is the pick up vessel. It is a white, fiberglass, 40-50 ft long motor vessel. Looks similar to a charter fishing boat. It is currently in port somewhere in Mexico. After rendezvous, the vessel will transport the drugs to a port on the Mexico-side of the Gulf of California, in the vicinity of Guymas, MX.
